**1000 PEOPLE A DAY DIAGNOSED
WITH LOBULAR BREAST CANCER**

Lobular Moon Shot Project

Raising money for research into Invasive Lobular Breast Cancer at the Institute of Cancer Research, London.

Key facts about Invasive Lobular Breast Cancer:

- The forgotten cancer
- DOES NOT have its own specific treatment
- Second most common type of breast cancer
- Different to the more common type - 'ductal', but treated the same
- Rarely shows on mammograms

One day, with funding, there could be a specific treatment for lobular breast cancer giving better longer term outcomes - please help us make that happen

To learn more please visit our website and watch a documentary and/or short film for free
